

Project Initialization and planning phass

Date	26 March 2026
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Problem Statement

Banks and financial institutions receive a large number of credit card applications every day, making manual verification slow, time-consuming, and prone to human error. Customers often experience delays or unnecessary rejections due to lengthy approval processes. Credit analysts also face challenges in accurately assessing applicant eligibility while managing large volumes of applications. Therefore, there is a need for an intelligent, automated system that can quickly analyze applicant information and predict credit card approval with high accuracy. This solution helps financial institutions improve decision-making, reduce processing time, and provide customers with faster and more reliable credit card eligibility assessments.

Example:

Problem Statement	I am (Customer)	I'm trying to	But Because	Which makes me feel
PS-1	A bank credit analyst	Approve credit card applications quickly	Manual verification is slow and error-prone	Frustrated and under pressure
PS-2	A credit card applicant	Check my credit card eligibility instantly	The approval process is lengthy and uncertain	Anxious and uncertain
PS-3	A financial compliance officer	Identify high-risk applicants accurately	Reviewing large volumes of applications manually is difficult	Overwhelmed and concerned about incorrect decisions
PS-4	A financial analyst	Evaluate credit card applications efficiently	Manual review of every application is time-consuming	Overwhelmed during peak application periods
PS-5	A bank manager	Reduce credit risk while approving genuine	It is difficult to identify high-risk applicants manually	Concerned about financial losses and incorrect approvals
