

Data Flow Diagram

Date	26 March 2026
Project Name	Credit Card Approval Prediction

Data Flow Diagram

The **Data Flow Diagram** illustrates the flow of data within the **Credit Card Approval Prediction System**. It shows how applicant information is collected, processed, stored, and analyzed by the machine learning model to generate credit card approval predictions. The DFD highlights the interaction between users, the database, and the prediction engine to ensure accurate and efficient approval decisions.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	A user or external system that provides applicant details or receives the credit card approval prediction (e.g., Applicant, Bank Officer)..
Rectangle with numbered header	Process	An operation that processes applicant data, validates inputs, and generates a credit card approval prediction using the machine learning model.
Rectangle (solid fill, no number)	Data Store	A repository where applicant details, credit history, trained ML models, and prediction results are stored for future use
Labeled arrow	Data Flow	Represents the movement of data between the applicant, system processes, database, ML model, and prediction results.

Example

The diagram below illustrates how data flows through the **Credit Card Approval Prediction System**, showing the interaction between external entities, system processes, and data stores. It provides a clear view of how applicant information is collected, validated, verified, and processed by the machine learning model to generate the final **credit card approval or rejection prediction**, enabling faster and more accurate decision-making for banks and financial institutions.
